COAL MINING NOW IS GOING FORWARD

Wyoming Mines Start Work With Partial Force of Coal Miners.

FIRST OF MONTH WILL SEE EVERYONE BUSY

Gunn-Quealy Company Has a Splendid Plant and Mine in Operation.

George E. Ford, prominently connect ed in an official capacity with the Gunn-Quealy Coal company of Gunn. Wyo., was a Salt Lake visitor on Monday for the purpose of conferring with President George E. Gunn. Mr. Ford naturally expressed complete gratification over the fact that the coal troubles of Wyoming have been settled amica bly, and the Gunn-Quealy company, with other Wyoming organizations, has started operations again on a partial scale. It was the desire of many of the miners not to begin work until the first of the month, so on Monday morning a partial force was set to work undergraph!

morning a partial force was set to work underground.

Mr. Ford states that the troubles arose over the demand of unskilled labor underground for better wages. The skilled labor was satisfied with its conditions, but there was nothing for it to do but to walk out with the fellow who was not satisfied. But by practically a unanimous vote it was determined to return to work, pending a proper settlement of the points in dispute. This decision was of tremendous importance not only to the coal mining companies, but to all the Western consumers.

companies, but to all the Western consumers.

In speaking about the Gunn-Quealy company, Mr. Ford said:

"I believe we have the best and most thoroughly equivoed plant for coal mining to be found anywhere. From the very beginning no expense was spared to place the mine in condition to produce a large tonnage, and to guarantee the absolute safety of the men employed. Everything was put up substantially: it is there to stay I have taken a great many coal mining experts through our mine, and every one has agreed that we have one of the most—if not the most—controlete plants in the country. We are now running at partial capacity, and are preducing 1000 tons of coal a day. Our ultimate capacity soon to be gained will be 3000 tons daily."

The Gunn-Quealy company is a Salt Lake and Wyoming organization.

PLENTY OF TENANTS AT 42 BROADWAY

Whether or not it always is safe to draw conclusions is a mooted matter ir Salt Lake these days among those who vainly are attenuting to solve the new membership of the Ohio Copper. Western circles are of the opinion that Heinze has let go of his control, and when the offices of the company were moved to 42 Broadway. New York City a few days ago, the impression went around that there might be a key to the mystery in this move.

the mystery in this move.

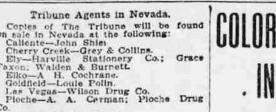

No. 42 Broadway is a skyseraper, and is the building in which Otto Heinze had his offices up to a short time ago.

There are innumerable tenants in this There are innumerable tenants in this building, among them being the Utah Consolidated company. So far the Utah Consolidated company has not been mentioned as a purchaser of Ohio stock, and there is doubt expressed that it has been. Those close to the Ohio Copper company believe that No. 74 Broadway way was satisfact. way was entirely too cramped to af-ford sufficient quarters for the com-pany, and this is given as a motive for the removal

pany, and this is given as a motive for the removal.

James McFarlane, the new president of the Ohio company, is a well known mining man cut this way. He made the report on the Cerro de Pasco properly in Peru for McCune and Haggin, and he has been prominently identified with the Daly interests of Butte. Mr. McFarlane was supposed to have retired to enjoy his fortune some time ago, and may have been coaxed out either for himself or for some allied interests to take over the executive power of the take over the executive power of the Ohio Copper company. The West would like to know who really is in charge of the Ohio destinies, and the mystery is expected to be solved when final announcement is made of the sale of the bonds.

COLORADO COMPAN

Company Need Not Complain, No Matter How Tintic Smelter Acts.

LATEST WORD OF GREAT BODY GIVEN

Some Facts Regarding Great Ore Body Now Being Opened Up.

As The Tribune has maintained all along, the Colorado Mining company will be the greatest beneficiary of the Tintic smelting situation regardless of the ultimate success or failure of the Knight plant. As stated in these columns Sunday, the Colorado management has made arrangements with the United States company whereby the Colorado ores are now coming into that market, and a well known mining man stated to The Tribune Monday that Superintendent Roundy says he can extract for a great many months to come double the present tonnage being hoisted from the mine. This same gentleman gives some information relative to the Colo-

some information relative to the Colorado ore body which demonstrates what a great big proposition this is. As is well known, this ore body extends through the Colorado mine north and south, having been shown to exist in the Beck Tunnel property to the north and in the Sioux Consolidated property to the south. The Colorado company has developed the ore by two shafts, known respectively as the North and South shafts. From the North shaft the management has worked a portion of the ore for about 130 feet along the strike, leaving an untouched space from the north face to the Beck Tunnel lines of 250 feet. From this 130 feet of work, the ore being extracted for a width of fifteen and for a height of seven feet, the management has extracted ore valued at over \$250,000. In the same space there is at least two times that amount still awaiting extraction, for the ore is ninety feet in width, and will come closer to \$200 per ton than to \$100 a ton. traction, for the ore is ninety feet in width, and will come closer to \$200 per

traction, for the ore is ninety feet in width, and will come closer to \$200 per ton than to \$100 a ton.

From the South shaft, considerable development work has been done on the strike of the ore body, but of untouched territory on the vein there is a great deal left for the future. For instance, between the two shafts there are 800 feet of virgin territory, and the conditions that now attach are such that those knowing the geology of the property have no hesitation in predicting ore continuously for this distance. From the South shaft toward the north on the ore body the values were not as rich as closer to this shaft. But as the face of the drift has worked farther north, the values have so increased that the present face is the richest in all the mine so far shown. The ore is a gray ash and sand carbonate, presenting a splendid appearance to one who knows carbonate ores. So inasmuch as this face working north is so rich, and it is known that the drift from the North shaft towards the south likewise is rich and wide, the 800 feet separating the two drift faces is logically expected to be productive of good results.

It is also worthy of mention and emphasis that the south drift from the South shaft, which is making for the Soux Consolidated lines, is much richer than it has been, and there are 500 feet vet between this south face and the Sioux territory. So out of a total

yet between this south face and the Sioux territory. So out of a total length of 2600 feet there are fully 1420 feet yet that has not been opened along the strike of this magnificent ore body, and most of this distance lies to the north of the South shaft, which has been shown to be the richest and largest part of the body itself, or which is the core

snown to be the richest and largest part of the body itself, or which is the core or the body.

It also should be remembered that the North and South shafts tapped the ore body at different depths, there being something like seventy feet difference between the two. So while the management has not extracted a greater depth than seven feet in any of the drifts, nor taken out a wider swath than three square sets, that portion that has been developed has been developed but partially, and greater tounages are certain to be extracted in the future.

It likewise is worthy of mention, continues The Tribune's informant, that since the 15th of last July the Colorado company, by employing only thir ty five men, has shipped enough ore to pay \$250,000 in dividends; to pay off \$38,000 worth of debts; to pay for the power line from Lehi to the Knight smelter at Tintic, itself a constant as

smelter at Tintic, itself a constant as set, and an unknown but extensive ton-nage remains at the Knight and United States smelters still unsettled for. This is a wonderful record, and as incompletely as the mine is developed today, unbiased mining engineers are author-ity for the statement that there is now in sight and in measurable form more than enough to pay dividends to the extent of the present selling price of

extent of the present selling price of the stock.

If the Knight smelter is proved a failure ultimately, and there is no one who will so predict honestly, as the plant should be given a complete opportunity to prove its worth, the Colorado company would find a ready market elsewhere for its ores, for the reason that they are highly desirable. The Knight interests are known to anticipate much more extended expenditures on the smelting plant before it reaches its final capacity and stage of worthiness, and there is no other way possible for them to get the required funds than from the Colorado company's dividends. So, as stated long ago, the company is in the best shape of any Knight organization, and that the dividends will be continued steadily admits of no doubt unless some unforeseen and improbable unless some unforeseen and improbable cataclasm destroys all the smelters in the Salt Lake valley.

OFFICIALS OF UNITED STATES COMPANY HERE

President Sharp and Managing Di-rector Holden of the United States Smelting, Refining & Mining company arrived in Salt Lake Monday morning on their usual trip of inspection. Both were very busy yesterday getting into touch with the affairs of the United States company, and until they visit the plant of the company at Bingham Junction will not express an opinion of this smelter and its present successful ntilization of a process by which all the damaging elements incident to smelter operation heretofore are eradicated. SOME STRONG SPOTS

While there is still some uneasiness in the local market, there were a few strong spots yesterday on the exchange. Dur-ing the day 73,020 shares of stock sold, having a market value of \$48,531. The fol-lowing were the closing unlisted and listed stock transcribers.

ON LOCAL EXCHANGE SALT LAKE SMELTERS GET CHAFEY ORES

New Nevada Mining Camp Selects Local Smelter for Rich Tonnage.

The American Smelting and Refining company will get the ores from the Chafey mining district of Nevada. This closes one of the warmest fights Nevada closes one of the warmest fights Nevada has seen for many a day, as there were four or five smelting companies from all over the West after the highly silicious high-grade gold ores of this new and splendid mining camp. The ore will range anywhere from \$60 to \$100 gold per ton, or even better, and it will come into the Garfield smelting plant at the rate of 1500 to 2000 tons monthly.

This good news was brought to Salt Lake City Monday by Charles Taylor, general manager of the Pioncer Ore Sampling company, whose efforts have been applied for several weeks to bring this highly desirable rock to the Salt Lake ore market. Mr. Taylor brings other good news from Chafey, a district, he says, that has an absence of that

other good news from Chafey, a district, he says, that has an absence of that boom which so often is characteristic of Nevada camps, but one which is hitting the high places when it comes to bringing high grade gold ore to light. The town is continually growing. It has a telephone line to Mill City, and will soon be in telephonic connections with Winnemucca. It is the proud possessor of a newspaper, the Chafey News, which made its first appearance hast Saturday. A two story hotel is being installed, and business and dwelling houses are being creeted. Three lumber vards have their hands full in supplying lumber for these new additions to the lumber for these new additions to the

In order to simplify matters, Mr. Chafey, the discoverer of the district, has incorporated his holdings under the name of the Chafey-Sims Mines company, and the capitalization, \$100,000, is directly in keeping with the modest manner in which all things are being directly in keeping with the modest manner in which all things are being done there. Another item of importance to the life of the district is the beginning of operations in the Chafey mill. This plant was started up yesterday, and will treat custom ores, lease ores as well, from now on. This mill will be of inestimable benefit to the mines of the camp. Mr. Chafey has demonstrated the existence of his main ore body for 1000 feet in length, and at one point it is fifteen feet in width, with only one wall shown. This rock is shipped just as it is broken down.

Mr. Taylor is interested in a lease in which ore is showing in four different places. Recently the management drove into the ore on the lower tunnel level, and it will range from \$27.50 to \$42 per ton; splendid rock for the mill. J. Bishop, another fortunate owner of a lease, has a car of ore now being settled for in this market which will range anywhere from \$200 to \$300 gold per ton. Mr. Taylor says Chafey looks better with each new day's work, and now that the ore market has been selected for the camp, it can be looked to for a splendid record in sending out fine yellow metal ores.

ow metal ores.

UTAHNS GET CLAIMS NEXT TO PRINCE MINE

Valuable Mining Ground Is Se- Local Machinery Works cured by Kirby and Hodson of Zion.

It was ascertained Monday morning that an important deal for Pioche mining territory of great worth had either been successfully consummated, or would be at any time. This is the deal by which the Rosy and Soft Snap claims, among others, come over into the hands of well-known Salt Lake mining operators. They are John Kirby and John T. Hodson, both of whom are well-known Utah and Nevada operators, and both of whom recently have been spending considerable time in the Pioche district.

The Rosy and Soft Snap claims are the north extension of the Prince Consolidated territory, and undoubtedly contain the extension of the cormous ore bodies so well known in the Prince

contain the extension of the enormous ore bodies so well known in the Prince proper. The consideration for this deal is a large one, and this readily can be understood from the fact that just one claim-length away to the south, or directly on the other side of the Prince Consolidated holdings, the sum of \$25,000 recently was offered for a half interest in one claim. This sum was refused, nor would the owner make the bidder any price on the same, Messrs, Kirby and Hodson have picked up a very valuable piece of Pioche land, and local circles expect them to develop another Prince Consolidated out of their new holdings.

YAMPA DAMAGE WAS REPAIRED QUICE

Job Completed Away Aher of Promise.

The accident to the aerial tramwith the Yampa Smelting company on Friday illustrates two items of interest of the Yampa Smelting company on for all Utah. One is the important that accessory to the Yampa companies of the management was considered and the seed of the management was considered by the seed of the management was considered and is the facilities presented the for keeping its fires alive, and the ond is the facilities presented the facilities presented the facilities presented the facilities of the facilities presented the facilities of the facilities of the facilities and so the facilities of the facilitie

To illustrate. The Yampa wheel broke Friday. The broken wheel broke Friday. The broken are were hustled down the canyon to depot and were received by the Market Engineering company after a side men had gone home Friday night. The men were roused out and wide all night. The Engineering pany promised a new wheeled time for installation on Month morning, but the job was causally installed, and the train operation, by 3 o'clock Sunday noon. The wheel was six feeled diameter, and weighed half a ton, the Yampa depended on some East works to fill the bill, the wheel win not have been started to completic the time local people had it up an interpretation.

the time local people had it up and to operation. There is only one lessed be drawn from this, and everyone see the point:

NOT ALL HARMONY IN THE ELY CA

James Phillips, Jr., president of Nevada Consolidated Copper comps S. W. Eccles, president of the Cum land-Ely company, and Daniel Gur heim, president of the Gurenheim ploration company, which controls the above properties, are at Elygether with their engineers, an would not be at all surprising if conforence was the first step in consolidation of the companies.

Stockholders of the Nevada Condated and Cumberland-Ely have led to expect a consolidation of Ely companies for over two years properties, being in the same a could be more economically manuater one head, and as these panies have a joint ownership of smelter and mill, as well as the yada Northern railroad, consolid would obviate any possible com

The joint ownership of the rand smelter has already result more or less friction where the m more or less friction where the mament of each company has been ing out for the interests of the pany it serves. The Guggenheim ple are more or less in the control management of each company. It case of the Nevada Consolidate development work has been aggreewhereas in the case of the Cumber Ely company the reverse has been rule during the past three or months. The reason for the languages siveness in the case of the has not been satisfactorily expland more or less friction has nat

would obviate any possible co

aggressiveness in the case of the bas not been satisfactorily expland more or less friction has nat developed as a result.

The Nevada Consolidated co is now planning an increase in the of the Steptoe plant by one-or making the capacity 6000 tons per day, of which the Nevada Consolidated will have 4000 tons, capacity (Cumberland-Ely 2000 tons, capacity of the smelting capacity, and buy additional stock in the Scompany, so that in the future will not be an equal ownership Steptoe plant.

Some of the large minority stocers of both the Nevada Consolidating the companies some fair basis which will effect economies and work to the gener of the Ely camp.—Beston New reau.

BOILERMAKERS GO ON STRIKE AT GARE

From twenty to thirty boiler employed by the Garfield smeltin pany have left the employ of the pany for the reason that a Greek was placed to work among them men protested to the managem the employment of foreign labor shops, and the company gare the time. The company expects to enough boilermakers at work wishort time, so that should any sity arise for such services the would not have to be closed down
